

Wetlands Bureau Decision Report

Decisions Taken
03/20/2006 to 03/26/2006

DISCLAIMER:

This document is published for information purposes only and does not constitute an authorization to conduct work. Work in jurisdiction may not commence until the applicant has received a posting permit.

Decisions are subject to appeal, and are reviewed by the federal agencies for compliance with Section 404 of the Federal Clean Water Act.

APPEAL:

I. Any affected party may ask for reconsideration of a permit decision in accordance with RSA 482-A:10,II within 20 days of the Department's issuance of a decision. Requests for reconsideration should:

- 1) describe in detail each ground for complaint. Only grounds set forth in the request for reconsideration can be considered at subsequent levels of appeal;
- 2) provide new evidence or information to support the requested action;
- 3) Parties other than the applicant, the town, or contiguous abutters must explain why they believe they are affected; and
- 4) Be mailed to the DES Wetlands Bureau, PO Box 95, Concord, NH 03302-0095.

II. An appeal of a decision of the department after reconsideration may be filed with the Wetlands Council in accordance with RSA 482-A:10, IV within 30 days of the department's decision. Filing of the appeal must:

- 1) be made by certified mail to Brian Fowler, Chairperson, Wetlands Council, PO Box 95, Concord, NH 03302-0095 (a copy should also be sent to the DES Wetlands Bureau);
- 2) contain a detailed description of the land involved in the department's decision; and
- 3) set forth every ground upon which it is claimed that the department's decision is unlawful or unreasonable.

MAJOR IMPACT PROJECT

2005-00763 NH DEPT OF TRANSPORTATION
MADBURY Bellamy River

Requested Action:

Request to amend permit to retain 229 sq. ft. of the temporary fill for access to a water shut off valve and withdraw 15,608 sq. ft. of permitted impacts relative to the Elliot Rose driveway access and parking area.

Inspection Date: 07/19/2005 by Gino E Infascelli

APPROVE AMENDMENT: AMENDMENT

Replace bridge on NH Rte. 155 with a 3 span structure over the B&M Railroad, relocate the intersection of Pudding Hill Rd., remove previously permitted driveway and construct new driveway access to Nicco Road impacting approximately 69,852 sq. ft. (28,402 temporary) of palustrine wetlands. Mitigate by providing a 7-acre Conservation Easement. NHDOT project #12922.

With Conditions:

1. All work shall be in accordance with plans:
 - a. By NHDOT Bureau of Highway Design, as received by the Department on April 21, 2005, except as conditioned below and
 - b. AMENDED plans by NHDOT Bureau of Construction dated 03/03/06 and/or as received on March 9, 2006.
2. This permit is contingent upon the submission of a project specific stream diversion and erosion control plans to the DES Wetlands Bureau. Those plans shall detail the timing and method of stream flow diversion during construction, and shall show the temporary siltation, erosion and turbidity control measures to be implemented.
3. Dredged material shall be placed out of the DES Wetlands Bureau jurisdiction.
4. Construction equipment shall not be located within surface waters.
5. Discharge from dewatering of work areas shall be to sediment basins that are: a) located in uplands; b) lined with hay bales or other acceptable sediment trapping liners; and c) set back as far as possible from wetlands and surface waters, in all cases with a minimum of 20 feet of undisturbed vegetated buffer.
6. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and shall remain until the area is stabilized.
7. Within three days of final grading in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
8. Where construction activities have been temporarily suspended within the growing season, all exposed soil areas shall be stabilized within 14 days by seeding and mulching.
9. Where construction activities have been temporarily suspended outside the growing season, all exposed areas shall be stabilized within 14 days by mulching and tack. Matting and pinning shall stabilize slopes steeper than 3:1.
10. The contractor responsible for completion of the work shall utilize techniques described in the DES Best Management Practices for Urban Stormwater Runoff Manual (January, 1996) and the Stormwater Management and Erosion and Sediment Control Handbook for Urban and Developing Areas in New Hampshire (August, 1992).
11. Extreme precautions to be taken within riparian areas to limit unnecessary removal of vegetation during road construction and areas cleared of vegetation to be revegetated as quickly as possible.
12. There shall be no further alteration to wetlands or surface waters without amendment of this permit.
13. Standard precautions shall be taken to prevent import or transport of soil or seed stock from nuisance, invading species such as purple loosestrife or Phragmites.
14. The impacts associated with the temporary work shall be restored immediately following construction.
15. Appropriate mitigation for this project shall be provided for in the future.
16. A culvert shall be installed at impact area FF.
17. There shall be only two access points off Rte. 155 for Eliot Rose drives and no curb cut at Station 101+57 R.

With Findings:

1. This is a major impact project per Administrative Rule Wt 303.02(c), alteration of more than 20,000 sq. ft. of non-tidal wetlands.
2. The amendment will allow for a water main emergency shut off valve and reduces the impacts to wetlands.

2006-00365 NH FISH & GAME DEPARTMENT
DEERFIELD Pleasant Lake

Requested Action:

Replace an existing 4 ft by 30 ft permanent dock on an average of 136 ft of frontage on Island Pond, Stoddard.

Conservation Commission/Staff Comments:

Con Com signed Exp Application

NH NHI and NH Fish and Game will not be submitting comments

APPROVE PERMIT:

Replace an existing 4 ft by 30 ft permanent dock on an average of 136 ft of frontage on Island Pond, Stoddard.

With Conditions:

1. All work shall be in accordance with plans by Gerald Galbreath, as received by the Department on February 27, 2006.
2. This permit shall not be effective until it has been recorded with the Registry of Deeds Office by the Permittee. A copy of the registered permit shall be submitted to the DES Wetlands Bureau prior to construction.
3. Repair shall maintain existing size, location and configuration.
4. This permit to replace or repair existing structures shall not preclude the Department of Environmental Services from taking any enforcement action or revocation action if the Department of Environmental Services later determines that these "existing structures" were not previously permitted or grandfathered.
5. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, maintained during construction, and shall remain until the area is stabilized.
6. Work authorized shall be carried out such that discharges in spawning or nursery areas during spawning seasons shall be avoided, and impacts to such areas shall be avoided or minimized to the maximum extent practicable during all times of the year.
7. Work shall be carried out in a time and manner such that disturbance to migratory waterfowl breeding areas and spawning areas shall be avoided.
8. Additional expedited minimum impact applications shall be accepted for the subject property for a period of 12 months only if the applicant demonstrates by plan that the additional project(s) are wholly unrelated or separate from the original application and when considered with the original application are not classified as minor or major.
9. All activity shall be in accordance with the Comprehensive Shoreland Protection Act, RSA 483-B (see attached fact sheet).

With Findings:

1. This project is classified as a minimum impact project per Rule Wt 303.04(v), repair of existing structures with no change in size, location or configuration.

MINOR IMPACT PROJECT

2004-01408 LANDERS TRUST, JOSEPH
MEREDITH Lake Winnepesaukee

Requested Action:

Amend permit to include the addition of two, 3 pile ice clusters.

Conservation Commission/Staff Comments:

Con. Com. did not comment on project.

APPROVE AMENDMENT:

Amend permit to read: Permanently remove an existing 300 sq ft "U" shaped seasonal docking structure, and construct two 4 ft x 36 ft crib supported piers connected by a 6 ft x 12 ft walkway, install a 14 ft x 30 ft seasonal canopy with a 10 ft x 12 ft seasonal boat lift, install two 3 pile ice clusters, install two seasonal jet ski lifts, convert an existing boat ramp into a 12 ft x 15 ft perched beach with stairs accessing the beach and the water, and reset three rocks on an existing jetty on an average of 154 ft of frontage on Meredith Bay, Lake Winnepesaukee.

With Conditions:

1. All work shall be in accordance with perched beach plans by Watermark Marine Construction dated June 10, 2004, as received by the Department on June 25, 2004, and revised dock plans by Watermark Marine Construction dated March 9, 2006, as received by the Department on March 10, 2006.
2. This permit shall not preclude the Department of Environmental Services (DES) from taking any enforcement action or revocation action if the DES later determines that these "existing structures" were not previously permitted or grandfathered.
3. This permit shall not be effective until it has been recorded with the Registry of Deeds Office by the Permittee. A copy of the registered permit shall be submitted to the DES Wetlands Bureau prior to construction.
4. Excavated material and construction debris shall be placed outside of the jurisdiction of the DES Wetlands Bureau.
5. Jetty repair shall maintain existing size, location and configuration, no additional rocks shall be added to the structure and there shall be no increase in height above the current elevation.
6. This permit does not allow for maintenance dredging.
7. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, maintained during construction, and shall remain until the area is stabilized.
8. Work authorized shall be carried out such that discharges in spawning or nursery areas during spawning seasons shall be avoided, and impacts to such areas shall be avoided or minimized to the maximum extent practicable during all times of the year.
9. Work shall be carried out in a time and manner such that there will be no disturbance to migratory waterfowl breeding areas or fish spawning areas.
10. Stone placed along the beach front for the purpose of retaining sand shall be placed above and/or landward of those rocks currently located along the normal high water line (Elevation 504.32).
11. The steps installed for access to the water shall be located completely landward of the normal high water line.
12. No more than 10 cu yd of sand may be used and all sand shall be located above the normal high water line.
13. This permit shall be used only once, and does not allow for annual beach replenishment.
14. The permittee shall provide appropriate diversion of surface water runoff to prevent erosion of beach area.
15. Revegetation of trees, shrubs and ground covers representing the density and species diversity of the existing stand of vegetation removed for this project shall begin at a distance no greater than 5 feet landward from the beach area.
16. Canopies shall be of seasonal construction type with a flexible fabric cover which shall be removed for the non-boating season.
17. All seasonal structures shall be removed for the non-boating season.
18. All activity shall be in accordance with the Comprehensive Shoreland Protection Act, RSA 483-B (see attached fact sheet).

With Findings:

1. This is a minor impact project per Administrative Rule Wt 303.03(d), construction of a permanent 3-slip docking system.
2. The need for the proposed impacts has been demonstrated by the applicant per Wt 302.01.
3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Wt 302.03.
4. The applicant has demonstrated by plan and example that each factor listed in Wt 302.04(a) Requirements for Application Evaluation, has been considered in the design of the project.
5. DES Staff conducted a field inspection of the proposed project on September 15, 2004. Field inspection determined the proposed construction will not impact the waterbody more than the existing structures.

Requested Action:

Permanently remove an existing non-conforming "U" shaped docking facility including a boathouse and construct two 6 ft by 49 ft seasonal piers connected by a 6 ft by 12 ft seasonal walkway, with 12 ft by 30 ft seasonal canopy over the center slip providing three boat slips on and average of 204 ft of frontage on Lake Winnepesaukee, Meredith.

Conservation Commission/Staff Comments:

Con Com thinks dock length is excessive

Loon Preservation Committee requests work avoided during the nesting period, mid -May thru mid-July

APPROVE PERMIT:

Permanently remove an existing non-conforming "U" shaped docking facility including a boathouse and construct two 6 ft by 49 ft seasonal piers connected by a 6 ft by 12 ft seasonal walkway, with 12 ft by 30 ft seasonal canopy over the center slip providing three boat slips on and average of 204 ft of frontage on Lake Winnepesaukee, Meredith.

With Conditions:

1. All work shall be in accordance with plans dated November 06, 2005, as received by the Department on February 10, 2006.
2. This permit shall not be effective until it has been recorded with the Registry of Deeds Office by the Permittee. A copy of the registered permit shall be submitted to the DES Wetlands Bureau prior to installation.
3. This permit shall not preclude the Department of Environmental Services (DES) from taking any enforcement action or revocation action if the DES later determines that these "existing structures" were not previously permitted or grandfathered.
4. This shall be the only structure on this water frontage and all portions of the dock shall be at least 20 ft. from abutting property lines or the imaginary extension of those lines into the water.
5. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and remain in place until the area is stabilized. Silt fence(s) must be removed once the area is stabilized.
6. Construction debris shall be placed outside of the jurisdiction of the DES Wetlands Bureau.
7. Seasonal pier shall be removed from the lake for the non-boating season.
8. No portion of the pier shall extend more than 49 feet from the shoreline at full lake elevation.
9. Canopies shall be of seasonal construction type with a flexible fabric cover which shall be removed for the non-boating season.
10. No construction or demolition shall be done during the critical Loon nesting period of May 15th through July 15th.
11. All activity shall be in accordance with the Comprehensive Shoreland Protection Act, RSA 483-B (see attached fact sheet).

With Findings:

1. This is a minor impact project per Administrative Rule Wt 303.03(d), construction of a 3 slip docking facility.
2. The need for the proposed impacts has been demonstrated by the applicant per Wt 302.01.
3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Wt 302.03.
4. The Loon Preservation Committee requested no construction between May 15th and July 15th.

2005-01483 LESSARD, PHILIP
OSSIPEE Unnamed Wetland

Requested Action:

Dredge and fill a total of 8,712 square feet of wetlands over three locations, including 85 square feet of impact for shoulder grading; 6,032 square feet of impact and installation of a 12" x 45' culvert; and 2,595 square feet of impact and installation of a 15" x 55' culvert, for roadway construction for a 35-lot subdivision on 58.4 acres.

Conservation Commission/Staff Comments:

Conservation Commission intervened; had positive comments.

APPROVE PERMIT:

Dredge and fill a total of 8,712 square feet of wetlands over three locations, including 85 square feet of impact for shoulder grading; 6,032 square feet of impact and installation of a 12" x 45' culvert; and 2,595 square feet of impact and installation of a 15" x 55' culvert, for roadway construction for a 35-lot subdivision on 58.4 acres.

With Conditions:

1. All work shall be in accordance with revised plan sheets entitled "Ossipee Woods", T1, S1-3 & S-5, and C1-10 by Trittech Engineering Corp. dated 1/17/2006, as received by the Department on 1/19/2006; and per revised plan sheets entitled "Ossipee Woods", CU-1 and CU-2, by Trittech Engineering Corp. dated 2/24/2006, as received by the Department on 2/24/2006.
2. This permit is contingent on approval by the DES Site Specific Program.
3. This permit is contingent on approval by the DES Subsurface Systems Bureau.
4. This permit shall not be effective until it has been recorded with the Registry of Deeds Office by the Permittee. A copy of the registered permit shall be submitted to the DES Wetlands Bureau.
5. There shall be no further alteration of wetlands for lot development, driveways, culverts, or for septic setback.
6. The deed which accompanies the sales transaction for each of the lots in this subdivision shall contain condition #5 of this approval.
7. The contractor responsible for completion of the work shall utilize techniques described in the DES Best Management Practices for Urban Stormwater Runoff Manual (January, 1996) and the Stormwater Management and Erosion and Sediment Control Handbook for Urban and Developing Areas in New Hampshire (August, 1992).
8. Orange construction fencing shall be placed at the limits of construction to prevent accidental encroachment on wetlands.
9. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and shall remain until the area is stabilized.
10. Silt fencing must be removed once the area is stabilized.
11. Appropriate turbidity controls shall be installed prior to construction, shall be maintained during construction such that no turbidity escapes the immediate dredge area, and shall remain until suspended particles have settled and the water at the work site has returned to normal clarity.
12. Discharge from dewatering of work areas shall be to sediment basins that are: a) located in uplands; b) lined with hay bales or other acceptable sediment trapping liners; c) set back as far as possible from wetlands and surface waters, in all cases with a minimum of 20 feet of undisturbed vegetated buffer.
13. Within three days of final grading in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
14. Where construction activities have been temporarily suspended within the growing season, all exposed soil areas shall be stabilized within 14 days by seeding and mulching.
15. Where construction activities have been temporarily suspended outside the growing season, all exposed areas shall be stabilized within 14 days by mulching and tack. Slopes steeper than 3:1 shall be stabilized by matting and pinning.
16. Proper headwalls shall be constructed within seven days of culvert installation.
17. Culvert outlets shall be protected in accordance with the DES Best Management Practices for Urban Stormwater Runoff Manual (January 1996) and the Stormwater Management and Erosion and Sediment Control Handbook for Urban and Developing Areas in New Hampshire (August 1992).
18. Dredged material shall be placed outside of the jurisdiction of the DES Wetlands Bureau.
19. Work shall be done during low flow.

With Findings:

1. This is a minor impact project per Administrative Rule Wt 303.03(h), alteration of less than 20,000 square feet in the aggregate of non-tidal wetlands that exceed the criteria of Wt 303.04(f).
2. The need for the proposed impacts has been demonstrated by the applicant per Wt 302.01. The wetlands on the property must be crossed in some location order to reach buildable uplands.
3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Wt 302.03. The applicant has made use of existing forest roads, and confined the crossings to the narrowest locations.
4. The applicant has demonstrated by plan and example that each factor listed in Wt 302.04(a) Requirements for Application Evaluation, has been considered in the design of the project.

5. The applicant has sought permission from the abutter, Richard Tebbetts, to encroach into the 20' abutter setback at the entrance to the property. The entrance and road frontage to the property is only 50'. In a document dated 11/18/2005, the abutter stated that he "...elected not to sign..." but that he was sure the applicant would "...reach his goals without it." He did not indicate any objections to the project.

6. On 1/19/2006 the applicant submitted a request to DES to waive the criteria of Rule Wt 304.04(a), relative to the 20' abutter setback. The applicant has demonstrated that the criteria specified in Rule 204.04 relative to a granting waiver request have been met, and DES therefore waives the requirements of Wt 304.04, Setback from Property Lines.

2005-01792 FISKE HYDRO INC, CHRISTOPHER KRUGER
HINSDALE Ashuelot River

Requested Action:

Dredge and fill 760 square feet in the bed of the Ashuelot River to install a Denil-type fish passage way for upstream fish passage and install temporary sand bag cofferdams, temporarily impacting 10,500 square feet (140 linear feet along the length of the channel) of the bed of the river to isolate the work area.

APPROVE PERMIT:

Dredge and fill 760 square feet in the bed of the Ashuelot River to install a Denil-type fish passage way for upstream fish passage and install temporary sand bag cofferdams, temporarily impacting 10,500 square feet (140 linear feet along the length of the channel) of the bed of the river to isolate the work area.

With Conditions:

1. All work shall be in accordance with plans by Fiske Hydro Inc. dated February 16, 2006, as received by the DES Wetlands Bureau on February 21, 2006.
2. The applicant shall coordinate with the Federal Energy Regulatory Commission (FERC), the United States Fish and Wildlife Service (USFWS), and the New Hampshire Fish and Game Department for all necessary approvals of the fish passage way and, effectiveness studies of the fish passage way.
3. Any future work on this property that is within the jurisdiction of the DES Wetlands Bureau as specified in RSA 482-A will require a new application and approval by the Bureau.
4. All activity shall be in accordance with the Comprehensive Shoreland Protection Act, RSA 483-B (see attached fact sheet).
5. Construction of the fish passage way shall be conducted in the dry.
6. Appropriate turbidity controls shall be installed prior to construction, shall be maintained during construction such that no turbidity escapes the immediate dredge area, and shall remain until suspended particles have settled and the water at the work site has returned to normal clarity.
7. Dredged material shall be placed outside of the jurisdiction of the DES Wetlands Bureau.
8. Dredged material shall be dewatered in settling basins that are located outside of the jurisdiction of the DES Wetlands Bureau and lined with acceptable sediment trapping liners.
9. Discharge from dewatering of work areas shall be to settling basins that are located outside of the jurisdiction of the DES Wetlands Bureau and lined with acceptable sediment trapping liners.
10. Prior to commencing work on the fish passage way, cofferdams shall be constructed to isolate the work area from the river.
11. Unconfined work within the river, exclusive of work associated with the installation of the cofferdams, shall be done during periods of low flow.
12. Cofferdams shall not be installed during periods of high flow, whether due to seasonal runoff or precipitation. Once a cofferdam is fully effective, confined work can proceed without restriction.
13. Construction of the cofferdams and fish passage way shall be done so as not to impede fish migrations or interfere with fish spawning areas.
14. Temporary cofferdams shall be entirely removed immediately following construction.
15. Construction equipment shall be inspected daily for leaking fuel, oil and hydraulic fluid prior to entering surface waters or wetlands.
16. Faulty equipment shall be repaired prior to entering jurisdictional areas.
17. The contractor shall have appropriate oil spill kits on site and readily accessible at all times during construction and each operator shall be trained in its use.

18. All refueling of equipment shall occur outside of surface waters or wetlands during construction.

With Findings:

1. This is a minor impact project per Administrative Rule Wt 303.03(l), projects that alter the course of or disturb less than 200 linear feet of an intermittent or perennial nontidal stream or river channel or its banks and do not meet the criteria for minimum impact under Wt 303.04(n). For intermittent streams, this distance shall be measured along the thread of the channel. For perennial streams or rivers, the total disturbance shall be calculated by summing the lengths of disturbances to the channel and the banks.
2. The need for the proposed impacts has been demonstrated by the applicant per Wt 302.01. The Fiske Mill Hydroelectric Project is the first obstruction on the Ashuelot River to upstream migrating anadromous fish. The Fiske Mill Hydroelectric Project is required by the Federal Energy Regulatory Commission (FERC) to install an upstream fish passage way to comply with FERC's May 21, 2003 "Order Modifying and Approving Upstream Fish Passage Plans and Design Drawings."
3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the DES Wetlands Bureau's jurisdiction per Wt 302.03. Installation of the fish passage way will allow migration of Atlantic salmon, American shad, river herring, and American eel as well as other river species over the dam.
4. The applicant has demonstrated by plan and example that each factor listed in Wt 302.04(a) Requirements for Application Evaluation, has been considered in the design of the project.
5. The applicant has stated that materials and equipment will be delivered to the work space using a crane and that no equipment will be driving through the river banks or bed.
6. The river will be diverted away from the work area by raising the dam's flashboards on the north side to divert flow to the south side and/or through the powerhouse by opening the head gates. Sand bags will be installed in the bypass reach to complete channeling of the flows to the south side of the dam reach.
7. Clean water that infiltrates into the work area will be pumped back to the river. Turbid water will be pumped through a filter bag or collected in a settling tank. After settling, the clean water will be pumped back to the river and silt will be removed off site for disposal.
8. The Ashuelot River Local Advisory Committee reviewed the proposed project with the applicant and has no comments regarding the project as presented.

2005-01925 UNIFIED INVESTMENT GROUP LLC
PEMBROKE Unnamed Wetland

Requested Action:

Dredge and fill 6640 square feet of palustrine forested wetland and including 144 linear feet of intermittent stream disturbance for access in the subdivision of 21.587 acres into 4 single family residential lots.

Conservation Commission/Staff Comments:

The conservation commission did not comment on this application.

APPROVE PERMIT:

Dredge and fill 6640 square feet of palustrine forested wetland and including 144 linear feet of intermittent stream disturbance for access in the subdivision of 21.587 acres into 4 single family residential lots.

With Conditions:

1. All work shall be in accordance with plans by Northpoint Engineering dated March 2005, and revised through February 22, 2006, as received by the Department on February 24, 2006, and Subdivision Plans by Granite State Surveying dated May 10, 2005, and revised through September 22, 2005, as received by the Department on February 24, 2006.
2. This permit is contingent on approval by the DES Subsurface Systems Bureau.
3. There shall be no further alteration of wetlands for lot development, driveways, culverts, or for septic setback.
4. The deed which accompanies the sales transaction for each of the lots in this subdivision shall contain condition #3 of this approval.
5. This permit shall not be effective until it has been recorded with the Registry of Deeds Office by the Permittee. A copy of the registered permit shall be submitted to the DES Wetlands Bureau.
6. Work shall be done during periods of no flow.

7. Appropriate siltation/erosion controls shall be in place prior to construction, shall be maintained during construction, and remain until the area is stabilized.
8. Proper headwalls shall be constructed within seven days of culvert installation.
9. Dredged material shall be placed outside of the jurisdiction of the DES Wetlands Bureau.
10. Culvert outlets shall be protected in accordance with the DES Best Management Practices for Urban Stormwater Runoff Manual (January, 1996) and the Stormwater Management and Erosion and Sediment Control Handbook for Urban and Developing Areas in New Hampshire (August, 1992).
11. Within three days of final grading in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
12. Silt fencing must be removed once the area is stabilized.
13. The contractor responsible for completion of the work shall utilize techniques described in the DES Best Management Practices for Urban Stormwater Runoff Manual (January, 1996) and the Stormwater Management and Erosion and Sediment Control Handbook for Urban and Developing Areas in New Hampshire (August, 1992).

With Findings:

1. This is a minor impact project per Administrative Rule Wt 303.03(h), projects involving less than 20,000 square feet of alteration in the aggregate in nontidal wetlands, nontidal surface waters, or banks adjacent to nontidal surface waters which exceed the criteria of Wt 303.04(f) and Administrative Rule Wt 303.03(l), projects that alter the course of or disturb less than 200 linear feet of an intermittent or perennial nontidal stream or river channel or its banks and do not meet the criteria for minimum impact under Wt 303.04(n).
2. The Town of Pembroke will not consider the upgrade of Old Robinson Road from a class IV roadway to a class V roadway.
3. This is the only access to the proposed buildable uplands.
4. The need for the proposed impacts has been demonstrated by the applicant per Wt 302.01.
5. The applicant has provided a subdivision plan which includes a cul-de-sac which illustrates a greater wetland impact.
6. The applicant has provided two common driveways for access to this 4 lot subdivision, limiting the number of times the wetland must be crossed.
7. The applicant has reduced the size of the rip-rap aprons and has provided 2:1 side slopes and headwalls at the wetland crossings.
8. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Wt 302.03.
9. The applicant has demonstrated by plan and example that each factor listed in Wt 302.04(a) Requirements for Application Evaluation, has been considered in the design of the project.

2005-02083 COMEAU, JOHN/OLIVIA
PELHAM Unnamed Wetland

Requested Action:

Approve name change to: Lake Mary of Pelham LLC, 10 Woodlawn Dr., Hudson NH 03051 per request received 3/17/2006.

APPROVE NAME CHANGE:

Dredge and fill 13,320 square feet of forested, scrub shrub and emergent wetlands for access to a 25 lot subdivision of which 4 lots are preservation land. Work includes installation of six access road culvert crossings and associated grading, roadway slope grading and filling of a previously constructed treatment swale. The applicant is providing wetland impact mitigation consisting approximately 38 acres of preservation land that includes 15.24 acres of uplands and 22.39 acres of wetlands, vernal pool easements on lots 10-10-11 and 10-10-12, and an amphibian crossing tunnel and an amphibian diversion walls connecting lots 10-10-11 and 10-10-12 to preservation lot 10-10.

With Conditions:

1. All work shall be in accordance with plans by Jones & Beach Engineers, Inc., revision date November 22, 2005, existing condition plans revision date October 25, 2005, as received by the Department on November 28, 2005 and narratives prepared by West Environmental Inc., as received by the Department on September 2, 2005 and November 28, 2005.
2. This permit is contingent on approval by the DES Site Specific Program.

3. This permit is contingent on approval by the DES Subsurface Systems Bureau.
4. This permit is contingent on review and approval, by the Department, of a final stream diversion/erosion control plan for installation of the box culvert at "Wetland Impact #6". Those plans shall detail the timing and method of stream flow diversion during construction, and show temporary siltation/erosion/turbidity control measures to be implemented.
5. Native material removed from the streambed during installation of the box culvert at Wetland Impact #6, shall be stockpiled separately and reused to emulate a natural channel bottom within the culvert. Any new materials used must be similar to the natural stream substrate and shall not include angular rip-rap.
6. Post-construction photographs of all culvert crossings including photographs of inlets and outlets shall be submitted for review and approval by the Department within 60 days of the completion of construction.
7. There shall be no further alteration of wetlands for lot development, driveways, culverts, or for septic setback.
8. The deed which accompanies the sales transaction for each of the lots in this subdivision shall contain condition #7 of this approval.
9. This permit shall not be effective until it has been recorded with the Registry of Deeds Office by the Permittee. A copy of the registered permit shall be submitted to the DES Wetlands Bureau.
10. At least 48 hours prior to the start of construction, a pre-construction meeting shall be held with NHDES Land Resources Management Program staff at the project site or at the DES Office in Concord, NH. to review the conditions of this wetlands permit and the NHDES Site Specific Permit. It shall be the responsibility of the permittee to schedule the pre-construction meeting, and the meeting shall be attended by the permittee, his/her professional engineer(s), wetlands scientist(s), and the contractor(s) responsible for performing the work.
11. Work shall be done during low flow.
12. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and shall remain until the area is stabilized.
13. Silt fencing must be removed once the area is stabilized.
14. Orange construction fencing shall be placed at the limits of construction adjacent to wetlands or surface waters to prevent accidental encroachment on wetlands.
15. Proper headwalls shall be constructed within seven days of culvert installation.
16. Within three days of final grading in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
17. Where construction activities have been temporarily suspended within the growing season, all exposed soil areas shall be stabilized within 14 days by seeding and mulching.
18. Where construction activities have been temporarily suspended outside the growing season, all exposed areas shall be stabilized within 14 days by mulching and tack. Slopes steeper than 3:1 shall be stabilized by matting and pinning.
19. Discharge from dewatering of work areas shall be to sediment basins that are: a) located in uplands; b) lined with hay bales or other acceptable sediment trapping liners; c) set back as far as possible from wetlands and surface waters, in all cases with a minimum of 20 feet of undisturbed vegetated buffer.
20. The contractor responsible for completion of the work shall utilize techniques described in the DES Best Management Practices for Urban Stormwater Runoff Manual (January, 1996) and the Stormwater Management and Erosion and Sediment Control Handbook for Urban and Developing Areas in New Hampshire (August, 1992).

Wetland and Upland preservation:

21. This permit is contingent upon preservation of approximately 38 acres (15.24 upland and 22.39 wetlands) through Town ownership and a warranty deed as depicted by plans and narratives received by the department on November 28, 2005 and narratives received on September 2, 2005.
22. The final deed language to be placed on the preservation areas shall be written to run with the land, and both existing and future property owners shall be subject to this easement.
23. The plan noting the preservation areas with a copy of the final language shall be recorded with the Registry of Deeds Office for each appropriate lot. A copy of each recording from the County Registry of Deeds Office shall be submitted to the DES Wetlands Bureau prior to the start of construction.
24. The Wetlands Bureau shall be notified by the applicant or Town of the placement of the preservation area by plaques or monuments to coordinate on-site review of their location prior to construction.
25. There shall be no placement of fill or construction of structures in the preservation areas, and storage of vehicles or hazardous materials is prohibited. Forest management and construction and maintenance of the proposed fire cisterns shall be allowed. Forest management activities shall comply with Condition #26 of this permit.

26. The cutting or removal of standing trees within the preservation areas shall be conducted only as part of the Forest Management Plan. Forest management activities shall be carried out in accordance with the Forest Management Plan prepared by a NH Licensed Forester for this property and will follow Best Management Practices for Erosion Control on Timber Harvesting Operations in New Hampshire.

27. The deed language for lots 10-10-11 and 10-10-12 depicted on plans received November 28, 2005 that prohibits disturbance to the vernal pool and surrounding vegetation shall be submitted to DES prior to sale of those lots.

28. The amphibian tunnel and directional walls between preservation area C on lot 10-10 and lots 10-10-12 shall be constructed prior to sale of the affected lots.

29. A qualified professional shall oversee the construction of the amphibian tunnel and directional walls.

30. A post construction report on the amphibian passage structures shall be submitted to DES following completion of the structures.

31. Monitoring the effectiveness of the amphibian passage structures shall be carried out by a qualified professional for two breeding seasons following stabilization of the area. The report to be submitted to the department for review shall document whether the pool continues to be used by amphibians and the number of egg masses present each breeding season.

32. Activities in contravention of the conservation easement shall be construed as a violation of RSA 482-A, and those activities shall be subject to the enforcement powers of the Department of Environmental Services (including remediation and fines).

With Findings:

1. This permit transfer is issued in accordance with NH Administrative Rule Wt 502.02.

**2005-02177 GOFFSTOWN PUBLIC WORKS, TOWN OF
GOFFSTOWN Harry Brook**

Requested Action:

Dredge and fill approximately 2,590 square feet (1,200 permanent and 1,390 temporary) of wetlands to replace an existing bridge over Harry Brook.

APPROVE PERMIT:

Dredge and fill approximately 6,865 square feet (consisting of 5,665 square feet of temporary impact and 1,200 square feet of permanent impact) of riverine, palustrine forested, scrub-shrub and emergent wetlands within and adjacent to Harry Brook. Work within jurisdiction consists of removing the existing approximately 7 foot x 19 foot x 26 foot span jack arch bridge and bridge abutments and associated sediment and replacing with an approximately 9 foot x 19 foot x 32 foot pre-cast arch bridge, footings, wing walls, restoration of the stream bed and adjacent wetlands and restoration of adjacent wetlands dominated by Japanese knotweed and construction of a new vegetated treatment swale.

With Conditions:

1. All work shall be in accordance with plans and narratives prepared by the Town of Goffstown, Department of Public Works, Proposed Treatment Swale plan sheet, dated December 19, 2005, as received by the Department on December 29, 2005 and plan sheets, revision dated February 10, 2006, as received by the Department on February 21, 2006, narratives as received by the Department on September 14, 2005, revised narratives, dated December 23, 2005, as received by the Department on December 29, 2005 and revised narratives, dated February 14, 2006 as received by the Department on February 21, 2006.
2. This permit is contingent on the Town of Goffstown obtaining construction easements from affected landowners outside of the existing road right-of-way. The Town shall supply copies of the recorded easements to DES Wetlands File No. 2005-02177 prior to the start of construction.
3. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and remain in place until the area is stabilized. Silt fence(s) must be removed once the area is stabilized.
4. Work shall be done during low flow conditions.
5. This permit is contingent on review and approval, by the DES Wetlands Bureau, of final stream diversion/erosion control plans. Those plans shall detail the timing and method of stream flow diversion during construction, and show temporary siltation/erosion/turbidity control measures to be implemented.
6. The Permittee shall monitor the weather and will not commence work within flowing water, including the installation of cofferdams, when rain is in the forecast.

7. All in-stream work shall be conducted in a manner that minimizes the duration of construction in the watercourse. In-stream work shall not exceed five consecutive days in total unless specifically authorized in writing by the Wetlands Bureau.
8. There shall be no excavation or operation of construction equipment in flowing water.
9. Discharge from dewatering of work areas shall be to sediment basins that are: a) located in uplands; b) lined with hay bales or other acceptable sediment trapping liners; c) set back as far as possible from wetlands and surface waters, in all cases with a minimum of 20 feet of undisturbed vegetated buffer.
10. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
11. Any native material removed from the streambed for installation of the new bridge footings shall be stockpiled separately and reused to emulate a natural channel bottom. Any new materials used within the stream channel must be similar to the natural stream substrate and shall not include angular rip-rap.
12. Temporary wetland impact areas shall be regraded to original contours.
13. Wetland restoration areas shall have at least 75% successful establishment of wetlands vegetation after two (2) growing seasons, or it shall be replanted and re-established until a functional wetland is replicated in a manner satisfactory to the DES Wetlands Bureau.
14. Follow-up monitoring reports shall be submitted to DES within 60-days following completion of the project and at the end of two consecutive growing season following the completion of the project. The reports shall include narratives and photographs describing the status of the wetland restoration areas. The reports shall be prepared by a certified wetland scientist.
15. Any areas from which vegetation has been cleared to gain access to the site shall be replanted with native species.
16. Construction equipment shall be inspected daily for leaking fuel, oil and hydraulic fluid prior to entering surface waters or wetlands. Faulty equipment shall be repaired prior to entering jurisdictional areas.
17. The contractor shall have appropriate oil spill kits on site and readily accessible at all times during construction and each operator shall be trained in its use.
18. All refueling of equipment shall occur outside of surface waters or wetlands during construction.

With Findings:

1. This is a minor impact project per Administrative Rule Wt 303.03(l); projects that alter the course of or disturb less than 200 linear feet of an intermittent or perennial nontidal stream or river channel or its banks and do not meet the criteria for minimum impact under Wt 303.04(n).
2. The need for the proposed impacts has been demonstrated by the applicant per Wt 302.01.
3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Wt 302.03.
4. The applicant has demonstrated by plan and example that each factor listed in Wt 302.04(a) Requirements for Application Evaluation, has been considered in the design of the project.
5. The New Hampshire Fish and Game Department (NHFGD) identified that their records show the brook floater (*Alasmidonta varicose*) and bridled shiner (*Notropis bifrenatus*) occur near the project site. NHFGD stated that they do not expect any impacts to these species by the project if an appropriately sized bottomless culvert is used and appropriate sediment controls be installed during construction and maintained until all soils are stabilized.
6. The proposed replacement bridge is approximately the same size as the existing bridge and is an open bottom structure.
7. The permit is contingent on appropriate erosions, sediment and turbidity controls.
8. The project includes construction of a new stormwater treatment swale that will improve the quality of the current stormwater runoff entering Harry Brook.
9. The Piscataquog River Local Advisory Committee (PRLAC) submitted comments suggesting that the crossing must be at least bankfull width to avoid future impacts to adjacent wetlands, timing of the work must be between July 1 and September 15 to protect spawning and larval life stages of fish species and that herbicide used to control Japanese knotweed on the site must be prevented from entering adjacent wetlands.
10. The proposed bridge is approximately the same size as the existing bridge.
11. The proposed bridge construction will take place in the month of August.
12. The revised restoration plan for the Japanese knotweed areas will not use herbicide and proposes removal of the knotweed by hand and replanting with native plant species.

Requested Action:

Fill 1,530 square feet of Ammonoosuc River bed and bank along 75 linear feet to construct five rock veins in order to redirect flow from and trap sediment to reestablish eroding bank areas along North Side Road.

Inspection Date: 01/20/2006 by Kirsten Pulkkinen

APPROVE PERMIT:

Fill 1,530 square feet of Ammonoosuc River bed and bank along 75 linear feet to construct five rock veins in order to redirect flow from and trap sediment to reestablish eroding bank areas along North Side Road.

With Conditions:

1. All work shall be in accordance with plans by Dennis A. Croteau dated February 02, 2006, as received by the Department on February 22, 2006.
2. This permit is contingent upon the receipt and approval of the final construction sequence by the Department.
3. Additional requests to dredge and/or fill in this area of the Ammonoosuc River bed or bank shall not be considered or approved until a complete analysis and assessment has been conducted by the applicant to determine a more effective, long-term solution, which alleviates the erosion problem, such as relocating the road further away from the bank of the river.
4. Work shall be done during annual low flow conditions and during the months of May through September. No in-stream work shall occur after October 1 unless a waiver of this condition is issued by the DES Wetlands Bureau in consultation with the NH Department of Fish and Game.
5. Work shall be conducted in a manner so as to minimize turbidity and sedimentation to surface waters and wetlands.
6. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and remain until the area is stabilized. Silt fence(s) must be removed once the area is stabilized.
7. Appropriate turbidity controls shall be installed prior to construction, shall be maintained during construction such that no turbidity escapes the immediate work area, and shall remain until suspended particles have settled and the water at the work site has returned to normal clarity.
8. There shall be no excavation or operation of construction equipment in flowing water.
9. Extreme precautions shall be taken within riparian areas to limit unnecessary removal of vegetation during construction and areas cleared of vegetation to be revegetated with native like species within three days of the completion of this project.
10. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.

With Findings:

1. This is a minor impact project per Administrative Rule Wt 303.03(1), alteration of less than 200 linear feet of a perennial stream.
2. The original proposal including dredging 1,925 square feet of stony deposits from the Ammonoosuc River bed to be used for 900 square feet (90 linear feet) of bank stabilization.
3. The NH Fish and Game Department suggested consultation with a fluvial geomorphologist for review of the original proposal.
4. DES Staff conducted a field inspection of the proposed project on January 20, 2006. Field inspection determined the least impacting short term solution was rock veins to redirect flows and reestablish bank.
5. Based on DES inspection the proposed project has been revised for the installation of rock veins only.
6. The proposed project will provide bank stabilization along North Side Road; therefore, ensuring public safety.
7. Additional requests to dredge and/or fill in this area of the Ammonoosuc River bed or bank shall not be considered or approved until a complete analysis and assessment has been conducted by the applicant to determine a more effective, long-term solution, which alleviates the erosion problem, such as relocating the road further away from the bank of the river.
8. The need for the proposed impacts has been demonstrated by the applicant per Wt 302.01.
9. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Wt 302.03.
10. The applicant has demonstrated by plan and example that each factor listed in Wt 302.04(a) Requirements for Application Evaluation, has been considered in the design of the project.

2005-02391 POPP, ALAN & CYNTHIA
GILMANTON Unnamed Wetland

Requested Action:

Dredge and fill 5300 square feet of previously impacted wetland for construction of a fire pond.

APPROVE PERMIT:

Dredge and fill 5300 square feet of previously impacted wetland for construction of a fire pond.

With Conditions:

1. All work shall be in accordance with plans by New England Forestry Consultants dated August 2005, as received by the Department on October 7, 2005.
2. Any future work on this property that is within the jurisdiction of the DES Wetlands Bureau as specified in RSA 482-A will require a new application and approval by the Bureau.
3. Work shall be conducted during low water conditions.
4. Appropriate siltation/erosion controls shall be in place prior to construction, shall be maintained during construction, and remain until the area is stabilized. Silt fence(s) must be removed once the area is stabilized.
5. Dredged material shall be placed outside of the jurisdiction of the DES Wetlands Bureau.
6. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
7. The contractor responsible for completion of the work shall utilize techniques described in the DES Best Management Practices for Urban Stormwater Runoff Manual (January, 1996) and the Stormwater Management and Erosion and Sediment Control Handbook for Urban and Developing Areas in New Hampshire (August, 1992).

With Findings:

1. This is a minor impact project per Administrative Rule Wt 303.03(e), construction of a pond with less than 20,000 square feet of impact in a wetland or surface waters, which does not meet the criteria of Wt 303.04(p).
2. The need for the proposed impacts has been demonstrated by the applicant per Wt 302.01.
3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Wt 302.03.
4. The applicant has demonstrated by plan and example that each factor listed in Wt 302.04(a) Requirements for Application Evaluation, has been considered in the design of the project.

2005-02469 CORLISS JR, GEORGE
BELMONT Whitcher Brook / Tioga River

Requested Action:

Confirm emergency authorization issued on October 18, 2005, to dredge approximately 300 square feet to remove woody debris from the stream channel of Whitcher Brook.

CONFIRM EMERGENCY AUTHORIZATION:

Dredge approximately 300 square feet to remove woody debris from the stream channel of Whitcher Brook.

With Conditions:

1. Any future work on this property that is within the jurisdiction of the DES Wetlands Bureau as specified in RSA 482-A will require a new application and approval by the Bureau.

With Findings:

1. This project is classified as a minor impact project per Rule Wt 303.03(l), projects that alter the course of or disturb less than 200 linear feet of an intermittent or perennial nontidal stream or river channel or its banks and do not meet the criteria for minimum impact under Wt 303.04(n).
2. The project was necessary to remove an existing blockage in the channel and redirect flows back to the historical channel and prevent property damage.
3. Emergency authorization for this work was issued by DES Wetlands Bureau Staff on October 18, 2005.
4. Review of the application submitted pursuant the emergency authorization indicates that work has been completed in accordance with the emergency authorization.

2005-02559 GAS-UP LLC, CHARLES & ANN ROBBINS
WAKEFIELD Unnamed Wetland

Requested Action:

Dredge and fill a total of 4,700 square feet of wetlands over three locations for construction of access, parking, and shoulder grading for a commercial development, including a medical office complex, grocery and pharmacy on 9.8 acres.

APPROVE PERMIT:

Dredge and fill a total of 4,700 square feet of wetlands over three locations for construction of access, parking, and shoulder grading for a commercial development, including a medical office complex, grocery and pharmacy on 9.8 acres.

With Conditions:

1. All work shall be in accordance with plans by Norway Plains Associates, Inc. dated September 2005, as received by the Department on 3/14/2006.
2. This permit is contingent on approval by the DES Site Specific Program.
3. This permit is contingent on approval by the DES Subsurface Systems Bureau.
4. There shall be no further alteration of wetlands for lot development, driveways, culverts, or for septic setback.
5. The contractor responsible for completion of the work shall utilize techniques described in the DES Best Management Practices for Urban Stormwater Runoff Manual (January, 1996) and the Stormwater Management and Erosion and Sediment Control Handbook for Urban and Developing Areas in New Hampshire (August, 1992).
6. Orange construction fencing shall be placed at the limits of construction to prevent accidental encroachment on wetlands.
7. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and shall remain until the area is stabilized.
8. Silt fencing must be removed once the area is stabilized.
9. Discharge from dewatering of work areas shall be to sediment basins that are: a) located in uplands; b) lined with hay bales or other acceptable sediment trapping liners; c) set back as far as possible from wetlands and surface waters, in all cases with a minimum of 20 feet of undisturbed vegetated buffer.
10. Within three days of final grading in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
11. Where construction activities have been temporarily suspended within the growing season, all exposed soil areas shall be stabilized within 14 days by seeding and mulching.
12. Where construction activities have been temporarily suspended outside the growing season, all exposed areas shall be stabilized within 14 days by mulching and tack. Slopes steeper than 3:1 shall be stabilized by matting and pinning.
13. Dredged material shall be placed outside of the jurisdiction of the DES Wetlands Bureau.
14. Work shall be done during low flow.

With Findings:

1. This is a minor impact project per Administrative Rule Wt 303.03(h), alteration of less than 20,000 square feet of non-tidal wetlands in the aggregate that exceed the criteria of Wt 303.04(f).
2. The need for the proposed impacts has been demonstrated by the applicant per Wt 302.01. Two of the three impacts are to

isolated wetlands positioned in unavoidable locations; the third impact is necessary to maintain driveway alignment.

3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Wt 302.03. The applicant has designed the side slope grading to minimize the encroachment into the wetland; the wetlands impact is minor in relation to the scope of the development of the 9.8 acre site.

4. The applicant has demonstrated by plan and example that each factor listed in Wt 302.04(a) Requirements for Application Evaluation, has been considered in the design of the project. The Conservation Commission did not report, and there were no vernal pools, NHI hits, or related concerns reported.

2005-02857 COLLINS, CHRISTOPHER & CHRISTINE
MEREDITH Lake Winnepesaukee

Requested Action:

Construct a 351 sq ft perched beach and bury an existing waterline to protect from freezing on 145 ft of frontage on Lake Winnepesaukee, Meredith.

Conservation Commission/Staff Comments:

Con Com has no concerns

DENY PERMIT:

Construct a 351 sq ft perched beach and bury an existing waterline to protect from freezing on 145 ft of frontage on Lake Winnepesaukee, Meredith.

With Findings:

Standards for Approval

1. In accordance with RSA 482-A:3, I, "No person shall excavate, remove, fill, dredge or construct any structures in or on any bank, flat, marsh, or swamp in and adjacent to any waters of the state without a permit from the department."
2. In accordance with Rule Wt 302.03, Avoidance and Minimization, applicants shall provide evidence that their proposal is the least impacting alternative solution.
3. In accordance with RSA 483-B:3, Consistency Required, state and local permits for work within the protected shorelands shall be issued only when consistent with policies of this chapter.
4. In accordance with Env-Ws 1405.05, Placement, states that no structure shall be built on a slope greater than 25%.

Findings of Fact

5. The Department received an application on November 30, 2005 for the construction of a perched beach on 145 ft of frontage on Lake Winnepesaukee.
6. The Department sent a More Information letter dated February 14, 2006 stating the proposed beach was not approvable since it impacted slopes exceeding 25% and requesting revised plans removing the beach impacts.
7. The Department received a response to the Request for More Information dated February 14, 2006 on March 16, 2006. The response did not address the Request for More Information letter and did not include the revised plans requested.

Findings in Support of Denial

8. Pursuant to RSA 483-B:3, and Env-Ws 1405.05 the Bureau shall not issue a permit for any project adjacent to surface waters that would modify an average grade of 25% or greater.
9. The proposed plan is for the construction of a structure within the bank of the waterbody with an average slope of more than 25 percent and therefore is not approvable.

2006-00016 CONVEX LLC
HEBRON Unnamed Wetland

Requested Action:

Dredge and fill 2710 square feet of palustrine forested wetland to upgrade an existing woods road for access and for two proposed driveway crossings in the subdivision of 12.22 acres into 5 single family residential lots.

Conservation Commission/Staff Comments:

The conservation commission did not comment on this application.

APPROVE PERMIT:

Dredge and fill 2710 square feet of palustrine forested wetland to upgrade an existing woods road for access and for two proposed driveway crossings in the subdivision of 12.22 acres into 5 single family residential lots.

With Conditions:

1. All work shall be in accordance with plans by Bernard Survey Associates and Fernstone Associates Inc dated July 2005, as received by the Department on January 3, 2006.
2. This permit is contingent on approval by the DES Subsurface Systems Bureau.
3. There shall be no further alteration of wetlands for lot development, driveways, culverts, or for septic setback.
4. The deed which accompanies the sales transaction for each of the lots in this subdivision shall contain condition #3 of this approval.
5. This permit shall not be effective until it has been recorded with the Registry of Deeds Office by the Permittee. A copy of the registered permit shall be submitted to the DES Wetlands Bureau.
6. Work shall be done during low flow.
7. Appropriate siltation/erosion controls shall be in place prior to construction, shall be maintained during construction, and remain until the area is stabilized.
8. Proper headwalls shall be constructed within seven days of culvert installation.
9. Culvert outlets shall be protected in accordance with the DES Best Management Practices for Urban Stormwater Runoff Manual (January, 1996) and the Stormwater Management and Erosion and Sediment Control Handbook for Urban and Developing Areas in New Hampshire (August, 1992).
10. Within three days of final grading in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
11. Silt fencing must be removed once the area is stabilized.
12. The contractor responsible for completion of the work shall utilize techniques described in the DES Best Management Practices for Urban Stormwater Runoff Manual (January, 1996) and the Stormwater Management and Erosion and Sediment Control Handbook for Urban and Developing Areas in New Hampshire (August, 1992).

With Findings:

1. This is a minor impact project per Administrative Rule Wt 303.03(1), projects that alter the course of or disturb less than 200 linear feet of an intermittent or perennial nontidal stream or river channel or its banks and do not meet the criteria for minimum impact under Wt 303.04(n).
2. The project is necessary to access uplands on the rear of the property.
3. The need for the proposed impacts has been demonstrated by the applicant per Wt 302.01.
4. The applicant has utilized the location of an existing woods road to limit the impacts.
5. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Wt 302.03.
6. The applicant has demonstrated by plan and example that each factor listed in Wt 302.04(a) Requirements for Application Evaluation, has been considered in the design of the project.
7. The Hebron Planning Board has approved this project contingent upon DES approvals.

Requested Action:

Repair a 21.5 ft x 16 ft perched beach and relocate the stairs to the water on an average of 180 ft of frontage on Lake Winnepesaukee, Alton.

Conservation Commission/Staff Comments:

Con Com has no objections

APPROVE PERMIT:

Repair a 21.5 ft x 16 ft perched beach and relocate the stairs to the water on an average of 180 ft of frontage on Lake Winnepesaukee, Alton.

With Conditions:

1. All work shall be in accordance with plans by NH Environmental Consultants LLC, as received by the Department on January 6, 2006.
2. This permit shall not preclude the Department of Environmental Services (DES) from taking any enforcement action or revocation action if the DES later determines that these "existing structures" were not previously permitted or grandfathered.
3. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and remain in place until the area is stabilized. Silt fence(s) must be removed once the area is stabilized.
4. Dredged or excavated material shall be placed outside of the DES Wetlands Bureau jurisdiction.
5. Existing rocks which have fallen shall be used for repair. No Additional Rocks.
6. Repair shall maintain existing size, location and configuration with the exception of the relocation of the stepped access to the water.
7. The steps installed for access to the water shall be located completely landward of the normal high water line.
8. No more than 10 cu yd of sand may be used and all sand shall be located above the normal high water line.
9. This permit shall be used only once, and does not allow for annual beach replenishment.
10. The permittee shall provide appropriate diversion of surface water runoff to prevent erosion of beach area.
11. Revegetation of trees, shrubs and ground covers representing the density and species diversity of the existing stand of vegetation removed for this project shall begin at a distance no greater than 5 feet landward from the beach area.
12. All activity shall be in accordance with the Comprehensive Shoreland Protection Act, RSA 483-B (see attached fact sheet).

With Findings:

1. This is a minor impact project per Administrative Rule Wt 303.03(f), construction or replenishment of a beach that does not exceed Wt 303.04(d) or Wt 303.04(aa).

MINIMUM IMPACT PROJECT

2003-00644 **MCFARLAND, SUZANNE**
RYE Atlantic Ocean

Requested Action:

Amend permit to read: Impact approximately 750 square feet of tidal buffer zone to repair an existing riprap wall and reconfigure existing boulders to serve as stepping stones along 120 linear feet of Parson's Creek and the Atlantic Ocean in Rye.

APPROVE AMENDMENT:

Amend permit to read: Impact approximately 750 square feet of tidal buffer zone to repair an existing riprap wall and reconfigure existing boulders to serve as stepping stones along 120 linear feet of Parson's Creek and the Atlantic Ocean in Rye.

With Conditions:

1. AMENDED CONDITION: All work shall be in accordance with plans by Easterly Surveying, Inc dated April 8, 2003, with revisions dated April 16, 2003, as received by the Department on May 8, 2003; and in accordance with materials submitted with the amendment request by Suzanne McFarland dated May 14, 2004, as received by the Department on May 18, 2004.
2. Any future work on this property that is within the jurisdiction of the DES Wetlands Bureau as specified in RSA 482-A will require a new application and approval by the Bureau.
3. Coastal staff shall be notified in writing prior to commencement of work and upon completion.
4. Appropriate siltation, erosion, and turbidity controls shall be in place prior to construction, shall be maintained during construction, and shall remain until the area is stabilized.
5. All work shall be done at low tide.
6. Work shall be conducted in a manner that avoids excessive discharges of sediments to fish spawning areas.
7. There shall be no change in the location, configuration, or dimensions of the existing riprap slope.
8. ADDED CONDITION: Access to the work area shall be through the beach access right-of-way northerly of the subject location.
9. ADDED CONDITION: Any beach grass or sand dune vegetation impacted by trucks or the excavator traveling through this area shall be restored/replaced immediately following the excavator leaving the beach.
10. ADDED CONDITION: A York Rake or similar device shall be used to regrade the beach contours to the original conditions and eliminate all the excavator tracks on the beach and ROW.

With Findings:

1. This is a minimum impact project per Administrative Rule Wt 303.04(v), repair of existing riprap slopes.
2. The need for the proposed impacts has been demonstrated by the applicant per Wt 302.01, as this past winter's storms have shifted existing riprap boulders and exposed the roots of several *Rosa rugosa* bushes on the property.
3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Wt 302.03, as this slope is too steep and is in too harsh an environment to be stabilized with vegetation.
4. Repair will maintain the same location, configuration, and dimensions of the existing riprap slope.
5. This approval is consistent with other riprap repair approvals along the New Hampshire seacoast.

2005-00851 POIRIER, MICHAEL
TUFTONBORO Unnamed Wetland

Requested Action:

Dredge and fill 600 square feet of palustrine forested wetland including installation of a 24-inch x 16 foot culvert in an intermittent stream for access to a proposed single family residence.

Conservation Commission/Staff Comments:

The conservation commission initially intervened on this application.

APPROVE PERMIT:

Dredge and fill 600 square feet of palustrine forested wetland including installation of a 24-inch x 16 foot culvert in an intermittent stream for access to a proposed single family residence.

With Conditions:

1. All work shall be in accordance with plans by Fernstone Associates dated April 2, 2005, and revised through February 17, 2006, as received by the Department on February 21, 2006.
2. This permit is contingent on approval by the DES Subsurface Systems Bureau.
3. There shall be no further alteration of wetlands for lot development, driveways, culverts, or for septic setback.
4. The permittee shall designate a qualified professional who will be responsible for monitoring construction and ensuring that construction is in accordance with the approved plan. The Wetlands Bureau shall be notified in writing of the designated professional prior to the start of work and if there is a change of status during the project.
5. Work shall be done during periods of non-flow.
6. Orange construction fencing shall be placed at the limits of construction to prevent accidental encroachment on wetlands.

7. Appropriate siltation/erosion controls shall be in place prior to construction, shall be maintained during construction, and remain until the area is stabilized. Silt fence(s) must be removed once the area is stabilized.
8. Dredged material shall be placed outside of the jurisdiction of the DES Wetlands Bureau.
9. Proper headwalls shall be constructed within seven days of culvert installation.
10. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.

With Findings:

1. This is a minimum impact project per Administrative Rule Wt 303.04(f), projects involving alteration of less than 3,000 square feet in swamps or wet meadows that are not in prime wetlands or do not meet the requirements of Wt 303.02(k), provided that no previous department permit has placed restrictions on the property of the applicant.
2. The need for the proposed impacts has been demonstrated by the applicant per Wt 302.01.
3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Wt 302.03.
4. The applicant has demonstrated by plan and example that each factor listed in Wt 302.04(b) Requirements for Application Evaluation, has been considered in the design of the project.

2005-02504 STEEVES TRUST, DORTHY
NEWBURY Sunapee Lake

Requested Action:

Repair existing cribs and concrete pilings supporting a 19.8 ft x 58.9 ft boathouse with residence over public submerged lands 60 ft of frontage in Newbury on Sunapee Lake.

APPROVE PERMIT:

Repair existing cribs and concrete pilings supporting a 19.8 ft x 58.9 ft boathouse with residence over public submerged lands 60 ft of frontage in Newbury on Sunapee Lake.

With Conditions:

1. All work shall be in accordance with plans as received by the Department on March 8, 2006 and scale notation received March 16, 2006.
2. This permit shall not be effective until it has been recorded with the appropriate County Registry of Deeds office by the Permittee. A copy of the registered permit shall be submitted to the DES Wetlands Bureau prior to construction.
3. Repair shall maintain existing size, location and configuration.
4. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and remain in place until the area is stabilized. Silt fence(s) must be removed once the area is stabilized.
5. Rocks removed from the lake bed shall be placed outside of the jurisdiction of the DES Wetlands Bureau unless another use is specifically permitted.
6. Rocks shall not be stockpiled in jurisdiction.
7. Existing crib rocks shall be used for crib repair, no additional rocks shall be used for crib repair.
8. This permit shall not preclude the Department of Environmental Services (DES) from taking any enforcement action or revocation action if the DES later determines that these "existing structures" were not previously permitted or grandfathered.
9. These shall be the only structures on this water frontage and any alterations shall be subject to NHDES approval.
10. All activity shall be in accordance with the Comprehensive Shoreland Protection Act, RSA 483-B (see attached fact sheet).

With Findings:

1. This is a minimum impact project per Administrative Rule Wt 303.04(v) maintenance, repair, or replacement in kind of existing structures.
2. The need for the proposed impacts has been demonstrated by the applicant per Wt 302.01.
3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to

areas and environments under the department's jurisdiction per Wt 302.03.

4. The applicant has demonstrated by plan and example that each factor listed in Wt 302.04(b) Requirements for Application Evaluation, has been considered in the design of the project.

2005-02603

DAVENPORT, DAVID

ALTON Hills Pond

Requested Action:

Dredge and fill a total of 138 square feet of perennial stream bank to install a 12 foot (width) x 20 foot(length) x 4 foot (height) open bottom arch culvert for access to an existing lot of record.

APPROVE PERMIT:

Dredge and fill a total of 138 square feet of perennial stream bank to install a 12 foot (width) x 20 foot(length) x 4 foot (height) open bottom arch culvert for access to an existing lot of record.

With Conditions:

1. All work shall be in accordance with plans by Thomas W. Varney dated October 20, 2005, as received by the Department on October 26,2006.
2. This permit is contingent on approval by the DES Subsurface Systems Bureau.
3. All activity shall be in accordance with the Comprehensive Shoreland Protection Act, RSA 483-B (see attached fact sheet).
4. No stumps shall be removed within 50 feet of the reference line per RSA 483-B (see attached fact sheet).
5. Any future work on this property that is within the jurisdiction of the DES Wetlands Bureau as specified in RSA 482-A will require a new application and approval by the Bureau.
6. Work shall be done during low flow.
7. Appropriate siltation/erosion controls shall be in place prior to construction, shall be maintained during construction, and remain until the area is stabilized. Silt fence(s) must be removed once the area is stabilized.
8. Appropriate turbidity controls shall be installed prior to construction, shall be maintained during construction such that no turbidity escapes the immediate dredge area, and shall remain until suspended particles have settled and the water at the work site has returned to normal clarity.
9. Dredged material shall be placed outside of the jurisdiction of the DES Wetlands Bureau.
10. Proper headwalls shall be constructed within seven days of culvert installation.
11. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.

With Findings:

1. This is a minimum impact project per Administrative Rule Wt 303.04(z), installation of a culvert or bridge and associated fill to permit vehicular access to a piece of property for a single family building lot or for noncommercial recreational uses.
2. The need for the proposed impacts has been demonstrated by the applicant per Wt 302.01.
3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Wt 302.03.
4. The applicant has demonstrated by plan and example that each factor listed in Wt 302.04(b) Requirements for Application Evaluation, has been considered in the design of the project.
5. The applicant has provided all of the information required by Env-Ws 1409.03.
6. The conservation commission has no objections to the proposed crossing.

EXPEDITED MINIMUM

2005-02129 THOMAS-TILLBERG, A ROBIN & DEBORAH
CHATHAM Unnamed Wetland

Requested Action:

Dredge and fill approximately 2,974 square feet of wetlands for restoration of previously disturbed wetlands, installation of 1.5-inch flexible pumpline, and removal of approximately 750 square feet of fill.

APPROVE PERMIT:

Dredge and fill approximately 2,974 square feet of wetlands for restoration of previously disturbed wetlands, installation of 1.5-inch flexible pumpline, and removal of approximately 750 square feet of fill.

With Conditions:

1. All work shall be in accordance with plans by Thaddeus Thorne Surveys, Inc. dated March 01, 2006, as received by the Department on March 07, 2006 and plans by B.H. Keith Associates received by the Department on March 15, 2006.
2. Work shall be done in low flow conditions.
3. Work shall be conducted in a manner so as to minimize turbidity and sedimentation to surface waters and wetlands.
4. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and remain until the area is stabilized. Silt fence(s) must be removed once the area is stabilized.
5. All material removed during work activities shall be removed down to the level of the original hydric soils.
6. The impacted area shall be regraded to the original contours.
7. Mulch within the restoration area shall be straw.
8. Dredged material shall be placed outside of the jurisdiction of the DES Wetlands Bureau.
9. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.

Wetland Restoration:

10. This permit is contingent upon the restoration of approximately 2,974 square feet of wetlands preliminary delineated on plans by Thaddeus Thorne Surveys, Inc. dated March 01, 2006, as received by the Department on March 07, 2006.
11. This permit is contingent upon the receipt of the final wetland restoration plan by April 30, 2006 and approval of the final wetland restoration plan by the Department.
12. Wetland restoration areas shall be properly constructed, landscaped, monitored and remedial actions taken that may be necessary to create functioning wetland areas similar to those of the wetlands destroyed by the project. Remedial measures may include replanting, relocating plantings, removal of invasive species, changing soil composition and depth, changing the elevation of the wetland surface, and changing the hydrologic regime.
13. The permittee shall designate a certified wetlands scientist as certified by the New Hampshire board of natural scientists, who will be responsible for monitoring and ensuring that the restoration areas are constructed in accordance with the restoration plan. Monitoring shall be accomplished in a timely fashion and remedial measures taken if necessary. The Wetlands Bureau shall be notified in writing of the designated professional prior to the start of work and if there is a change of status during the project.
14. Wetland soils from areas vegetated with purple loosestrife or other invasive species shall not be used in the wetland restoration site
15. Seed mix within the restoration area shall be a wetland seed mix appropriate to the area and shall be applied in accordance with manufacturers specifications and shall not contain reed canary grass (*Phalaris arundinacea*). The receipt and contents of the wetland mix shall be supplied to NHDES within 10 days of application.
16. Native wetland shrub species appropriate to the area shall be planted.
17. There shall be no substitutions made for the plant species specified on the approved plan for replanting purposes without prior written approval from DES. Shrub species identified on the approved plan shall be a minimum container size of one gallon and the tree species listed shall be saplings with a minimum diameter breast high (dbh) of three (3) inches.
18. The permittee or a designee shall conduct a follow-up inspection after the first growing season, to review the success of the restoration area and schedule remedial actions if necessary. A report outlining these follow-up measures and a schedule for completing the remedial work shall be submitted by December 1 of that year
19. Wetland restoration areas shall have at least 75% successful establishment of wetlands vegetation after one (1) growing seasons, or shall be replanted and re-established until a functional wetland is replicated in a manner satisfactory to the DES Wetlands Bureau.
20. The permittee shall attempt to control invasive, weedy species such as purple loosestrife (*Lythrum salicaria*) and common reed (*Phragmites australis*) by measures agreed upon by the Wetlands Bureau if the species is found in the restoration areas during construction and during the early stages of vegetative establishment.
21. A post-construction report documenting the status of the completed project with photographs shall be submitted to the Wetlands Bureau within 60 days of the completion of construction.

With Findings:

1. This is a minimum impact project per Administrative Rule Wt 303.04(f), alteration of less than 3,000 square feet of wetlands.
2. This permit is contingent on the restoration of previously disturbed wetlands on the property.
3. This permit is contingent on the submittal of a wetland restoration plan by April 30, 2006
4. The need for the proposed impacts has been demonstrated by the applicant per Wt 302.01.
5. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Wt 302.03.
6. The applicant has demonstrated by plan and example that each factor listed in Wt 302.04(b) Requirements for Application Evaluation, has been considered in the design of the project.

2005-02155 SMITH, MARY
MOULTONBOROUGH Unnamed Wetland

Requested Action:

Approve name change to: NH Electric Cooperative Inc, 579 Tenny Mountain Highway, Plymouth NH 03264 per request received 3/15/06.

Conservation Commission/Staff Comments:

The conservation commission signed this minimum impact form.

APPROVE NAME CHANGE:

Dredge and fill 358 square feet of wet meadow for access to a proposed electrical substation.

With Conditions:

1. All work shall be in accordance with plans by David M Dolan and Associates PC dated August 30, 2005, as received by the Department on September 15, 2005.
2. Any future work on this property that is within the jurisdiction of the DES Wetlands Bureau as specified in RSA 482-A will require a new application and approval by the Bureau.
3. Work shall be conducted during low water conditions.
4. Appropriate siltation/erosion controls shall be in place prior to construction, shall be maintained during construction, and remain until the area is stabilized. Silt fence(s) must be removed once the area is stabilized.
5. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
6. The contractor responsible for completion of the work shall utilize techniques described in the DES Best Management Practices for Urban Stormwater Runoff Manual (January, 1996) and the Stormwater Management and Erosion and Sediment Control Handbook for Urban and Developing Areas in New Hampshire (August, 1992).

With Findings:

1. This permit transfer is issued in accordance with NH Administrative Rule Wt 502.02.

2005-02776 WOLFEBORO, TOWN OF
WOLFEBORO Unnamed Wetland

Requested Action:

Dredge and fill 2985 square feet for the repair and replacement of 4 culverts within an existing access road.

APPROVE PERMIT:

Dredge and fill 2985 square feet for the repair and replacement of 4 culverts within an existing access road.

With Conditions:

1. All work shall be in accordance with plans by Woodard and Curran dated February 2006, as received by the Department on March 2, 2006.
2. Any future work on this property that is within the jurisdiction of the DES Wetlands Bureau as specified in RSA 482-A will require a new application and approval by the Bureau.
3. Work shall be done during periods of non-flow.
4. Appropriate siltation/erosion controls shall be in place prior to construction, shall be maintained during construction, and remain until the area is stabilized. Silt fence(s) must be removed once the area is stabilized.
5. Proper headwalls shall be constructed within seven days of culvert installation.
6. Culvert outlets shall be protected in accordance with the DES Best Management Practices for Urban Stormwater Runoff Manual (January, 1996) and the Stormwater Management and Erosion and Sediment Control Handbook for Urban and Developing Areas in New Hampshire (August, 1992).
7. Repair shall maintain existing size, location and configuration.
8. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
9. The contractor responsible for completion of the work shall utilize techniques described in the DES Best Management Practices for Urban Stormwater Runoff Manual (January, 1996) and the Stormwater Management and Erosion and Sediment Control Handbook for Urban and Developing Areas in New Hampshire (August, 1992).

With Findings:

1. This is a minimum impact project per Administrative Rule Wt 303.04(x), maintenance, repair, or replacement of a nondocking structure such as a culvert, headwall, bridge, dam, residential utility line, or rip-rap slope of less than 50 linear feet.
2. The need for the proposed impacts has been demonstrated by the applicant per Wt 302.01.
3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Wt 302.03.
4. The applicant has demonstrated by plan and example that each factor listed in Wt 302.04(b) Requirements for Application Evaluation, has been considered in the design of the project.

2005-03051

RAY-TEK CONSTRUCTION

JAFFREY Unnamed Wetland

Requested Action:

Dredge and fill 2,935 square feet of palustrine forested and emergent wetlands to install one (1) 24-inch x 55-foot culvert and associated inlet and outlet protection to construct an access road for a 13-lot residential subdivision on an approximately 18 acre parcel with approximately 7.85 acres of open space.

APPROVE PERMIT:

Dredge and fill 2,935 square feet of palustrine forested and emergent wetlands to install one (1) 24-inch x 55-foot culvert and associated inlet and outlet protection to construct an access road for a 13-lot residential subdivision on an approximately 18 acre parcel with approximately 7.85 acres of open space.

With Conditions:

1. All work shall be in accordance with plans by SVE Associates dated October 6, 2005, as received by the DES Wetlands Bureau on January 31, 2006 and Plan Sheet 1 (Sheet C-3) dated March 7, 2006 (revised) as received by the DES Wetlands Bureau on March 10, 2006.
2. This permit is contingent on approval by the DES Subsurface Systems Bureau.
3. This permit shall not be effective until it has been recorded with the County Registry of Deeds by the Permittee and a copy of the registered permit has been received by the DES Wetlands Bureau.
4. The deed which accompanies the sales transaction of each lot in this subdivision shall contain condition #5 of this approval.
5. There shall be no further alteration of wetlands for lot development, driveways, culverts, or for septic setback.
6. All work shall be done during low flow.
7. Dredged material shall be placed outside of the jurisdiction of the DES Wetlands Bureau.
8. Discharge from dewatering of work areas shall be to sediment basins that are: a) located in uplands; b) lined with hay bales or other acceptable sediment trapping liners; c) set back as far as possible from wetlands and surface waters, in all cases with a minimum of 20 feet of undisturbed vegetated buffer.
9. The contractor responsible for completion of the work shall utilize techniques described in the DES Best Management Practices for Urban Stormwater Runoff Manual (January 1996) and the Stormwater Management and Erosion and Sediment Control Handbook for Urban and Developing Areas in New Hampshire (August 1992).
10. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and remain until the area is stabilized. Silt fence(s) must be removed once the area is stabilized.
11. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
12. All slash remaining from previous land clearing operations shall be removed from wetlands per the approved plans.
13. The wetlands from which the slash is removed shall be replanted with an approved wetland seed mix appropriate for NH forested wetlands.
14. The wetlands from which the slash is removed shall be monitored and a written report documenting their condition shall be submitted to the DES Wetlands Bureau by July 15 of the year following restoration of the wetlands. The report shall include photographic documentation. The DES Wetlands Bureau shall require subsequent monitoring and may require corrective measures if the wetlands are not adequately restored.
15. Wetland restoration shall not be considered successful if sites are newly invaded by nuisance species such as common reed or

purple loosestrife during the first full growing season following project completion. The applicant shall work with the DES Wetlands Bureau to attempt to eradicate nuisance species newly found in the restored wetlands during this same period.

16. Proper headwalls shall be constructed within seven days of culvert installation.
17. Orange construction fencing shall be placed at the limits of construction adjacent to each wetland impact area to prevent accidental encroachment on wetlands.
18. Construction equipment shall be inspected daily for leaking fuel, oil, and hydraulic fluid prior to entering surface waters or wetlands.
19. Faulty equipment shall be repaired prior to entering jurisdictional areas.
20. The contractor shall have appropriate oil spill kits on site and readily accessible at all times during construction and each operator shall be trained in its use.
21. All refueling of equipment shall occur outside of surface waters or wetlands during construction.
22. Additional expedited minimum impact applications shall be accepted for the subject property for a period of 12 months only if the applicant demonstrates by plan that the additional project(s) are wholly unrelated or separate from the original application and when considered with the original application are not classified as minor or major.

With Findings:

1. This is a minimum impact project per Administrative Rule Wt 303.04(f), projects involving alteration of less than 3,000 square feet in swamps or wet meadows that are not in prime wetlands or do not meet the requirements of Wt 303.02(k), provided that no previous department permit has placed restrictions on the property of the applicant.
2. The need for the proposed impacts has been demonstrated by the applicant per Wt 302.01. The impacts are necessary for the construction of an access road for a 13-lot residential subdivision.
3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the DES Wetlands Bureau's jurisdiction per Wt 302.03. The subdivision was configured to minimize wetlands impacts by constructing a common access road and crossing the wetlands at the narrowest point.
4. The applicant has demonstrated by plan and example that each factor listed in Wt 302.04(b) Requirements for Application Evaluation, has been considered in the design of the project.
5. The Conservation Commission signed the application and submitted a written report of their site inspection to the DES Wetlands Bureau (received December 30, 2005). The Commission takes no issue with the wetlands delineation or with the request for the culverted crossing but requested that restoration measures be incorporated into the project in the area of the wetland crossing.
6. The applicant submitted plans to remove the slash remaining from previous land clearing operations from the wetlands in the area of the proposed crossing and reseed the wetlands with a wetland seed mix appropriate for NH forested wetlands. The wetlands from which the slash is removed shall be monitored and a written report documenting their condition shall be submitted to the DES Wetlands Bureau by July 15 of the year following restoration of the wetlands. The report shall include photographic documentation. The DES Wetlands Bureau shall require subsequent monitoring and may require corrective measures if the wetlands are not adequately restored.
7. An increase in stormwater peak runoff from the subject property will be offset by the construction of two detention basins in uplands. The applicant has demonstrated that the net result is no increase in the peak rate of stormwater flowing off-site in the post-development condition as compared to the pre-development condition.
8. The proposed subdivision consists of 13 single family building lots approximately 10.15 acres in total area and approximately 7.85 acres of open space.
9. The proposed lots will be served by municipal water.
10. This permit is contingent on approval by the DES Subsurface Systems Bureau.

2006-00042 HALL, RICHARD
ENFIELD Unnamed Stream

Requested Action:

Dredge and fill approximately 1,350 square feet of wetlands along approximately 32 linear feet of intermittent stream to install a 24-inch x 32-foot corrugated culvert for driveway access to a single lot of a two lot subdivision.

APPROVE PERMIT:

Dredge and fill approximately 1,350 square feet of wetlands along approximately 32 linear feet of intermittent stream to install a

24-inch x 32-foot corrugated culvert for driveway access to a single lot of a two lot subdivision.

With Conditions:

1. All work shall be in accordance with plans by Richard Hall as received by the Department on March 20, 2006.
2. This permit is contingent on approval by the DES Subsurface Systems Bureau.
3. Work shall be done in dry conditions.
4. Work shall be conducted in a manner so as to minimize turbidity and sedimentation to surface waters and wetlands.
5. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and remain until the area is stabilized. Silt fence(s) must be removed once the area is stabilized.
6. Dredged material shall be placed outside of the jurisdiction of the DES Wetlands Bureau.
7. Proper headwalls shall be constructed within seven days of culvert installation.
8. Culverts shall be laid at original grade.
9. The contractor responsible for completion of the work shall utilize techniques described in the DES Best Management Practices for Urban Stormwater Runoff Manual (January, 1996) and the Stormwater Management and Erosion and Sediment Control Handbook for Urban and Developing Areas in New Hampshire (August, 1992).
10. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.

With Findings:

1. This is a minimum impact project per Administrative Rule Wt 303.04(n), alteration of less than 50 linear feet of an intermittent stream.
2. The need for the proposed impacts has been demonstrated by the applicant per Wt 302.01.
3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Wt 302.03.
4. The applicant has demonstrated by plan and example that each factor listed in Wt 302.04(b) Requirements for Application Evaluation, has been considered in the design of the project.

2006-00328 FABIASCHI, MICHAEL & DEBRA
NORTH HAMPTON Unnamed Wetland

Requested Action:

Indirectly impact 290 square feet of jurisdictional forested wetland for the construction of a 30'x34' cantilevered addition over the wetland for a single family residential dwelling on 15.35 acres.

Conservation Commission/Staff Comments:

The North Hampton Conservation Commission signed the Minimum Impact Expedited Application.

APPROVE PERMIT:

Indirectly impact 290 square feet of jurisdictional forested wetland for the construction of a 30'x34' cantilevered addition over the wetland for a single family residential dwelling on 15.35 acres.

With Conditions:

1. All work shall be in accordance with plans by Ames MSC dated October 25, 2005 and revised through January 26, 2006, as received by the Department on February 17, 2006.
2. DES staff shall be notified in writing prior to commencement of work and upon its completion.
3. Any further alteration of areas on this property that are within the jurisdiction of the DES Wetlands Bureau will require a new application and further permitting by the Bureau.
4. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.

With Findings:

1. This is a minimum impact project per Administrative Rule Wt 303.04(o), as deemed minimum by the Department.
2. The need for the proposed impacts has been demonstrated by the applicant per Wt 302.01, as they are necessary to expand the existing dwelling.
3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Wt 302.03, as there will be no direct impacts to the wetlands. A small portion of the structure will be cantilevered over the wetland and there will be no adverse effects on the wetlands.
4. The applicant has demonstrated by plan and example that each factor listed in Wt 302.04(b) Requirements for Application Evaluation, has been considered in the design of the project.

2006-00329 FLANAGAN, KATHERINE
BARRINGTON Unnamed Wetland

Requested Action:

Dredge and fill 398 square feet of wetlands to install an 18" x 25' culvert associated with construction of a driveway to a single family house lot.

Conservation Commission/Staff Comments:

Conservation Commission signed expedited application.

APPROVE PERMIT:

Dredge and fill 398 square feet of wetlands to install an 18" x 25' culvert associated with construction of a driveway to a single family house lot.

With Conditions:

1. All work shall be in accordance with plans by Pohopek Land Surveyors & Septic Design, LLC dated 1/16/2006, as received by the Department on 2/17/2006.
2. This permit is contingent on approval by the DES Subsurface Systems Bureau.
3. Additional expedited minimum impact applications shall be accepted for the subject property for a period of 12 months only if the applicant demonstrates by plan that the additional project(s) are wholly unrelated or separate from the original application and when considered with the original application are not classified as minor or major.
4. There shall be no further alteration of wetlands for lot development, driveways, culverts, or for septic setback.
5. The deed which accompanies the sales transaction for each of the lots in this subdivision shall contain condition #4 of this approval.
6. This permit shall not be effective until it has been recorded with the Registry of Deeds Office by the Permittee. A copy of the registered permit shall be submitted to the DES Wetlands Bureau.
7. Orange construction fencing shall be placed at the limits of construction to prevent accidental encroachment on wetlands.
8. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and shall remain until the area is stabilized.
9. Work shall be carried out in a time and manner such that disturbance to migratory waterfowl breeding and nesting areas shall be avoided.
10. No fill shall be done to achieve septic setback and no dredging shall take place that would contradict the DES Subsurface Systems Bureau rules.
11. No fill shall be done for lot development.
12. No fill shall take place in Atlantic white cedar swamps.
13. Work shall be done during low flow.

With Findings:

1. This is a minimum impact project per Administrative Rule Wt 303.04(f), alteration of less than 3,000 square feet of swamps or wet meadows.
2. The need for the proposed impacts has been demonstrated by the applicant per Wt 302.01. The building envelope of this lot

cannot have its own access without a wetlands crossing.

3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Wt 302.03. The project makes use of a existing driveway now to be shared, and is for a 12' wide driveway with only 398 square feet of impact.

4. The applicant has demonstrated by plan and example that each factor listed in Wt 302.04(b) Requirements for Application Evaluation, has been considered in the design of the project.

This project is not adjacent to Barrington designated prime wetlands.

2006-00349 BURKAM, AMY & WENDY GRAHAM
WAKEFIELD Pine River Pond

Requested Action:

Construct a 6 ft by 20 ft seasonal wharf attached to an existing 6 ft by 20 ft seasonal wharf providing two boatslips on an average of 176 ft of frontage on Pine River Pond, Wakefield.

Conservation Commission/Staff Comments:

Con Com signed Exp Application

No response from NH NHI or NH Fish and Game

APPROVE PERMIT:

Construct a 6 ft by 20 ft seasonal wharf attached to an existing 6 ft by 20 ft seasonal wharf providing two boatslips on an average of 176 ft of frontage on Pine River Pond, Wakefield.

With Conditions:

1. All work shall be in accordance with plans by K Armstrong dated December 5, 2005, as received by the Department on February 21, 2006.
2. This permit shall not be effective until it has been recorded with the Registry of Deeds Office by the Permittee. A copy of the registered permit shall be submitted to the DES Wetlands Bureau prior to installation.
3. This permit shall not preclude the Department of Environmental Services (DES) from taking any enforcement action or revocation action if the DES later determines that these "existing structures" were not previously permitted or grandfathered.
4. Seasonal pier shall be removed from the lake for the non-boating season.
5. No portion of the pier shall extend more than 6 feet from the shoreline at full lake elevation.
6. Seasonal piers shall be removed for the non-boating season.
7. All activity shall be in accordance with the Comprehensive Shoreland Protection Act, RSA 483-B (see attached fact sheet).

With Findings:

1. This is a minimum impact project per Administrative Rule Wt 303.04(a), construction of a seasonal dock or wharf if no more than 2 slips are proposed.
2. The need for the proposed impacts has been demonstrated by the applicant per Wt 302.01.
3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Wt 302.03.

2006-00367 HALL, LINDLEY
TUFTONBORO Lake Winnepesaukee

Requested Action:

Permanently remove an 8 ft by 48 ft seasonal dock and construct a 6 ft by 48 ft seasonal dock providing for two slips on and average of 150 ft of frontage on Lake Winnepesaukee, Tuftonboro.

Conservation Commission/Staff Comments:

Con Com has submitted comments with no concerns

APPROVE PERMIT:

Permanently remove an 8 ft by 48 ft seasonal dock and construct a 6 ft by 48 ft seasonal dock providing for two slips on and average of 150 ft of frontage on Lake Winnepesaukee, Tuftonboro.

With Conditions:

1. All work shall be in accordance with plans as received by the Department on February 23, 2006.
2. This permit shall not be effective until it has been recorded with the Registry of Deeds Office by the Permittee. A copy of the registered permit shall be submitted to the DES Wetlands Bureau prior to installation.
3. This permit shall not preclude the Department of Environmental Services (DES) from taking any enforcement action or revocation action if the DES later determines that these "existing structures" were not previously permitted or grandfathered.
3. Seasonal pier shall be removed from the lake for the non-boating season.
4. No portion of the pier shall extend more than 48 feet from the shoreline at full lake elevation.
5. All activity shall be in accordance with the Comprehensive Shoreland Protection Act, RSA 483-B (see attached fact sheet).

With Findings:

1. This is a minimum impact project per Administrative Rule Wt 303.04(), construction of a seasonal dock.

2006-00385 THOMAS, WILLIAM
ANDOVER Unnamed Wetland

Requested Action:

Retain an existing 15" x 20' culvert within an intermittent stream (impacting 80 square feet and 20 linear feet) for access to a single-family house lot that was previously approved for forestry access.

Conservation Commission/Staff Comments:

*In a letter dated 3/9/06, the Andover Conservation Commission stated that they "...voted unanimously to recommend that the Wetlands Bureau approve the application as submitted".

*In a phone conversation on 03/22/06, the NH Fish & Game Dept. stated that they had no concerns about the project.

APPROVE PERMIT:

Retain an existing 15" x 20' culvert within an intermittent stream (impacting 80 square feet and 20 linear feet) for access to a single-family house lot that was previously approved for forestry access.

With Conditions:

1. All work shall be in accordance with plans by Beaver Brook Environmental Consultants, LLC dated December 27, 2005, as received by the Department on February 24, 2006.
2. This permit is contingent on approval by the DES Subsurface Systems Bureau.
3. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and remain in place until the area is stabilized. Silt fence(s) must be removed once the area is stabilized.
4. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
5. Any further alteration of areas on this property that are within the jurisdiction of the DES Wetlands Bureau will require a new application and further permitting by the Bureau.
6. All activity shall be in accordance with the Comprehensive Shoreland Protection Act, RSA 483-B (see attached fact sheet).

With Findings:

1. This proposal is considered a Minimum Impact Project per NH Administrative Rule Wt 303.04(n), as retaining the culvert disturbs less than 50 linear feet of the intermittent stream.
2. The need for the proposed impacts has been demonstrated by the applicant per Wt 302.01.
3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Wt 302.03.
4. The applicant has demonstrated by plan and example that each factor listed in Wt 302.04(b) Requirements for Application Evaluation, has been considered in the design of the project.
5. In a letter dated March 9, 2006, the Andover Conservation Commission stated that they "...voted unanimously to recommend that the Wetlands Bureau approve the application as submitted".
6. In a phone conversation on March 22, 2006, the NH Fish & Game Dept. stated that they had no concerns about the project.
7. The approved plans show the culvert location approximately 220 feet from the prime wetland area, with the intermittent stream flowing away from the prime wetland area. In addition, the house location is setback 102 feet from the prime wetland area; therefore, the project is not considered adjacent to prime wetlands.
8. The project as proposed meets the requirements of the Comprehensive Shoreland Protection Act (RSA 483-B) along the Blackwater River.

2006-00403 GALBREATH, GERALD
STODDARD Island Pond

Requested Action:

Replace an existing 4 ft by 30 ft permanent dock on 136 ft of frontage on Island Pond, Stoddard.

Conservation Commission/Staff Comments:

Con Com signed Exp Application

NH NHI and NH Fish and Game will not be submitting comments

APPROVE PERMIT:

Replace an existing 4 ft by 30 ft permanent dock on 136 ft of frontage on Island Pond, Stoddard.

With Conditions:

1. All work shall be in accordance with plans by Gerald Galbreath dated February 11, 2006, as received by the Department on February 27, 2006.
2. This permit shall not be effective until it has been recorded with the Registry of Deeds Office by the Permittee. A copy of the registered permit shall be submitted to the DES Wetlands Bureau prior to construction.
3. This permit to replace or repair existing structures shall not preclude the Department of Environmental Services from taking any enforcement action or revocation action if the Department of Environmental Services later determines that these "existing structures" were not previously permitted or grandfathered.
4. Repair shall maintain existing size, location and configuration.
5. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, maintained during construction, and shall remain until the area is stabilized.
6. Work authorized shall be carried out such that discharges in spawning or nursery areas during spawning seasons shall be avoided, and impacts to such areas shall be avoided or minimized to the maximum extent practicable during all times of the year.
7. Work shall be carried out in a time and manner such that disturbance to migratory waterfowl breeding areas and spawning areas shall be avoided.
8. Additional expedited minimum impact applications shall be accepted for the subject property for a period of 12 months only if the applicant demonstrates by plan that the additional project(s) are wholly unrelated or separate from the original application and when considered with the original application are not classified as minor or major.
9. All activity shall be in accordance with the Comprehensive Shoreland Protection Act, RSA 483-B (see attached fact sheet).

With Findings:

1. This project is classified as a minimum impact project per Rule Wt 303.04(v), repair of existing structures with no change in size, location or configuration.

PERMIT BY NOTIFICATION

2005-02827 ALLARD, KEVIN
GILFORD Lake Winnepesaukee

Requested Action:

Install seasonal boatlift, two seasonal PWC lifts, repair nonconforming deck, repair stairs, and walkways in-kind.

PBN DISQUALIFIED:

Install seasonal boatlift, two seasonal PWC lifts, repair nonconforming deck, repair stairs, and walkways in-kind.

With Findings:

In accordance with 482-A:3 IV-a. Seasonal dock is not legally existing due to the following:

1. This is not the only structure on the shoreline frontage.
2. The seasonal dock is not located at least 20 ft from abutting proerty line or the imaginary extension of the property line over the water.

Requested Action:

Install seasonal boatlift, two seasonal PWC lifts, repair nonconforming deck, repair stairs, and walkways in-kind.

PBN IS COMPLETE:

Install seasonal boatlift, two seasonal PWC lifts, repair nonconforming deck, repair stairs, and walkways in-kind.

With Findings:

1. This is a minimum impact project per Administrative Rule Wt 303.04(ac), installation of a seasonal boatlift.
